

Costruzione stampi EPS - EPP  
EPS - EPP Mould maker

## COMPANY PROFILE

### COMEL S.R.L.

COMEL was founded in 1978 by 7 members who acquired a former workshop that was already operating in the manufacturing sector of the first revolutionary EPS moulds.

Having always privileged, in our growth path, the technological innovation and the active collaboration with the Customers to find together the best response to their requirements, what distinguishes us is to give special solutions to moulds, even very complicated, in every field of application.

These aspects, as well as the strong international vocation and passion for this job, are our strengths and values that have always accompanied us and will guide us in the future, with the certainty that this is, together with our long-standing experience, the only way to maintain excellence in the market and to achieve ever better results in terms of reliability and quality.

Another important factor that characterizes our company is the flexibility, which, together with the company's dimension as well as its technical capacity, allows us to meet requests for large quantities of moulds simultaneously, giving reasonable lead times.

The Customer Satisfaction is in fact our cornerstone, starting from the understanding of his needs, so that we have been able to build long-term relationships with customers worldwide. This makes us proud to diffuse our Made in Italy all over the world, today in more than 50 countries.

Today we produce Aluminum moulds for both EPS and EPP products and many other expandable materials (including the biodegradable) for the most various sectors such as Construction (ICF technology, panels for ceilings, roofs and walls, insulation, decorations, shutter boxes), Packaging (food boxes and fish boxes, multifunctional boxes and packaging in general for household appliances), the Automotive (parts in EPP car components such as seats, sun visors, headrests, tool boxes), the HVAC, the Sport (helmets, soles), Agriculture (seedbeds). We can also make efficient automated moulds, with technology like Sandwich, Monoblock, moulds for Thermoforming, as well as different types of surface treatments (like standard or laser engravings, and coatings in Teflon or other materials).

Moreover, the equipment in our workshop is continuously increased and improved (always the latest generation of milling machines) allowing us to better respond to new demands.

Our headquarters is in Santa Maria di Sala (Venice) in Via Grandi, 29 and the distance from the airports of Venice and Treviso is only 35 km.
