

## MAXIMIZE YOUR OUTPUT WITH A PRODUCTIVITY KIT

Counterbalance Upgrade

Servo Drive Upgrade

Servo Eject Upgrade

As time and technology changes, so do your equipment needs. You may have machines that have given you years of service but now have outdated controls, you may be turning work away because your machine is not capable of running certain products from specific materials or maybe there is some new technology or added functionality that would help you be more productive and increase your output. Brown Machine Group specializes in productivity kits that will improve all of the above and more – get the most out of your equipment!

We understand your business, and are proud to be your partner. We know what it takes to keep your machines running at peak efficiency. If you're not sure what your machine needs, we'll visit your facility for an extensive machine audit. If your equipment requires significant upgrades or your machine condition has deteriorated beyond on-site repair, we offer complete remanufacturing services. By upgrading worn or outdated equipment with the latest technology, remanufacturing provides performance approaching "new machine" capabilities at a lower cost, for maximum return on your investment.

**To request an equipment audit, speak to your representative, or call us at: 877.702.4142.**
